CAT994K	243 Tons		< 3,000,000	Not Available	Not Available	Not Available

***Note:** Getting information for new units is very difficult. As such, this is only to be considered as a guide.

- The information contained above for competitor pricing is all based on ****second-hand or used equipment pricing** (except for ours which is based on a new machine price).
- Further note many of these prices came with machines that had **thousands of hours logged**, with some machines being **eight (8) years old**.
- However, the pricing scale clearly highlights the very significant price difference between brands and why the **Container-Loader offers the best value for your money**.

- The UGI Container Loader is purpose built to be 'lifting and emptying' and 'moving' containers around **with ease** (watch our videos) and is especially suited for many industries such as (but not limited to) wharves/ports, recycling, mining of coal and other minerals, forestry and mills of various sorts, farms/ranches etc.
